

Proposal for the Population Health Screening & Labour Screening

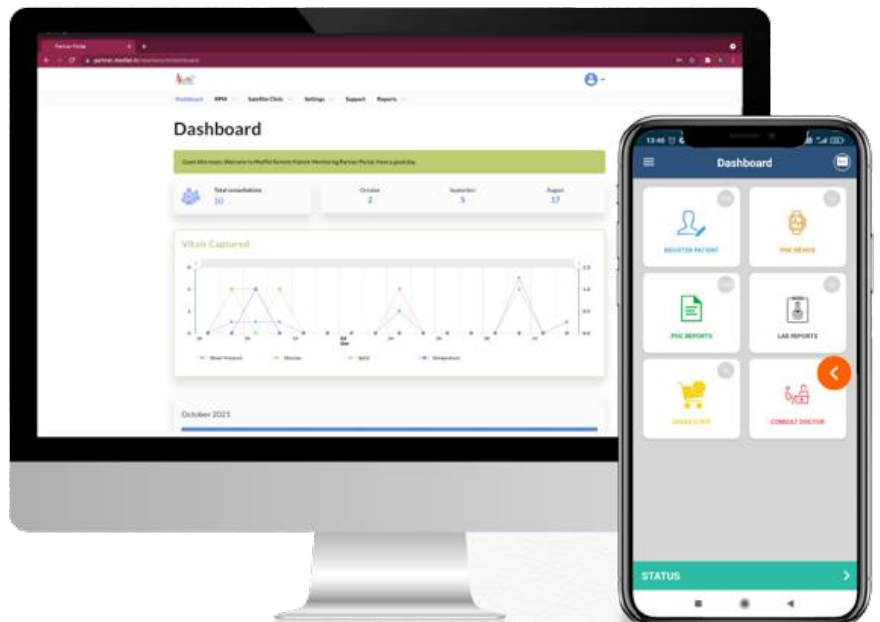

Background

Medigraphy offers an end-to-end platform that empowers care providers and patients immensely. We provide customized & omnichannel 'Connected Care Solutions' for patients. Our solution aggregates smart devices, real-time dashboards & health data to create personalized remote monitoring & actionable insights. Medigraphy delivers better clinical and business outcomes for providers and patients while creating a seamless digitally connected-care ecosystem.

In an endeavor to ensure improved quality of health services to healthcare providers, Medigraphy offers Digital Health diagnostics (iLab), Satellite Clinic and Remote Patient Monitoring. The Medigraphy platform enables the capture, digitization and transmission of information.

With the advent of technology, Medigraphy has been working on using advanced technology to ensure seamless real-time capture and management of data using point-of-care IoT (internet of things) medical devices in real-world healthcare provider settings to enable a wide range of basic diagnostics. This use of technology makes healthcare accessible, affordable and user-friendly to both patients and healthcare providers.

Connected IoT medical devices for point of care testing help eliminate errors in data entry and save time needed for manual entry of the health parameter data in paper registers and/or digital databases. The data captured is updated in realtime enabling quick actions for monitoring and intervention by the program managers and healthcare providers.

MEDIGRAPHY OFFERINGS:

Medigraphy connected device kits

All in One Kit - iLab:

The kits contains medical grade devices like ECG device, Digital body analyzer scale, Digital blood pressure monitors, Digital glucometer, Digital pulse oximeter, Fetal heart monitor, Lipid analyzer, HbA1C, Otoscope, IR thermometer and Digital Stethoscope.

LIVE consultation with Reputed Doctor's

Test requires LANCET pricks or small sample of Urine

Instant Diagnostic Results and Reports

Easy to follow Report Formats

Preventive Health Check-Ups

Cost Effective

List of Devices – Mobile Health Unit (MHU)

Devices	Certification	Devices	Certification
Height & Weight	CE	Hb1AC	CE, FDA
Body Fat Analyser / BMI	CE	Lipid Profile	CE
Body Temperature	CE	Spirometer	CE
Blood Pressure	CE	Otoscope	CE
Pulse Rate	CE	12 Lead ECG	CE
Oxygen Saturation	CE	Digital Stethoscope	FDA
SPO2	CE	Fetal Doppler	CE, FDA
Hb (Haemoglobin)	CE	Rapid Tests **	
Glucometer	CE	Tele-Consultation	

Device - 8" Mobile Device (Android OS) OR 10" with Multi Touch Tablet

HL7 & HIPPA Compliant | Third Party Device Integration facility available (Chargeable)

MEDIGRAPHY iLAB (CONNECTED CARE & ADVANCE TELEHEALTH):

An affordable virtual connected care solution that would allow care providers in remote areas to perform a wide range of basic diagnostics for patients. This provides the tools to gather and forward patient information. The real-time information enables the care provider to take better & informed decision and thus results in a superior prognosis for the patient.

iLab Features

- **One platform for 15+ IoT - Point for Care Devices**
- **Customized Branding**
- **Integrated Payment Platform**
- **Personalised care & increased ROI**

iLab Compatible Devices:
Blood Pressure Monitor, Glucometer, Haemometer, HbA1c Analyser, Lipid Analyser, ECG, Otoscope, Fundoscopy, SpO2, Thermometer, Stethoscope & Body Composition Analyzer etc.

- **AI enabled reporting (ECG)**
- **Home Care & Remote Monitoring**
- **Patient engagement through evidence based intelligent reminders**
- **Actionable Insights**

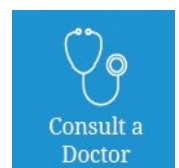

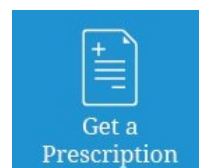

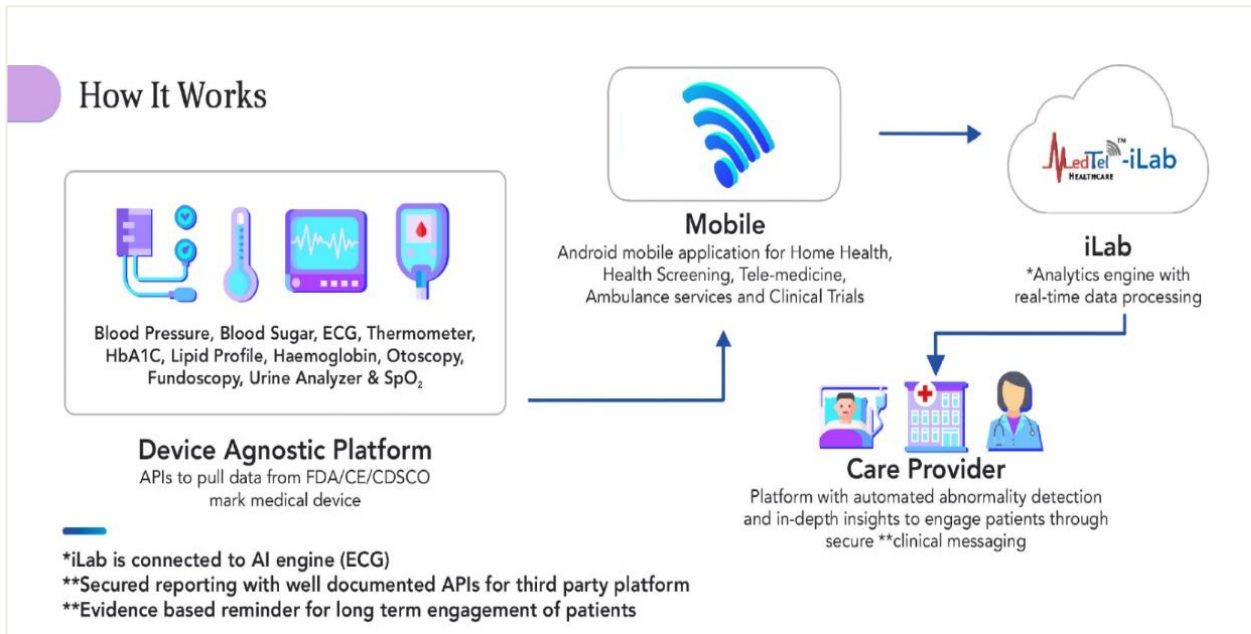

Important Pointers:

- ◆ Certified by FDA/ EUROPEAN CE/CDSCO approved
- ◆ Access to a Mobile application (Android App) and Admin-controlled Dashboard
- ◆ After completion of tests, all health parameters get collected automatically and updated on a real-time basis.
- ◆ The kit is portable, shockproof, waterproof and easy to carry around

WORKFLOW:

For each of the beneficiaries that came to the paramedic for their check-up, the paramedic had to measure their vitals using the devices after connecting them to the Medigraphy application on a mobile-based platform using Bluetooth for the device pairing. Once the device was connected to the Medigraphy Healthcare app, it captured and analyzed real-time data and displayed it on the application. Once all the tests are completed an elaborate report gets generated instantly which can be further used for consultation from the care provider
